Stationary UZ30 EXPRESS is one of the few truly uncompromising solutions for bevelling large series of smaller and small workpieces or long, narrow strip material. UZ30 EXPRESS may be used not only for bevelling, but also is also suitable for just deburring the material. It is able to handle both these operations with confidence typical of much larger and more expensive machines. Thanks to the unique geometry of the tool the feed rate can be set up to the speed of 3.5 m/min. / 11.5 ft/min. If longer panels are bevelled it is possible to equip the machine with additional input and output table thus extending the work surface to remarkable 2 824 mm / 111.18 in.
